REP. TUVALU MACAO, CHINA					
The table «Progress and Regression» shows progress, stagnation and regression with respect to the internationally agreed social development goals. Progress and regression have been calculated in linear terms on the basis of changes produced since 1990 and the most recent data with respect to key indicators for selected commitments. Each variable was categorised on a scale ranging from significant progress to significant regression, taking into account the distribution of the annual growth rates registered between 1990 and the latest available data.								4 U	UU	MARSHALL ISLANDS MICRONESIA, FED. STS. NIUE TONGA					

The table «Progress and Regression» shows progress, stagnation and regression with respect to the internationally agreed social development goals. Progress and regression have been calculated in linear terms on the basis of changes produced since 1990 and the most recent data with respect to key indicators for selected commitments. Each variable was categorised on a scale ranging from significant progress to significant regression, taking into account the distribution of the annual growth rates registered between 1990 and the latest available data.

A second table, «The Present Situation» shows the current status of social development in each country with regard to the same series of chosen indicators based on the most recent data available. In other words, it shows how near or far countries are on average from achieving their targets, without indicating whether they are progressing towards them or not. The countries' ranking was calculated by taking into account the distribution of values for each variable and converting them into four categories:

1) close to or beyond targets; 2) above average; 3) below average; 4) critical situation.

The table «Progress and Regression» therefore reflects the rate of progress, while the table «The Present Situation» provides a «snapshol» of countries' current situation. The two tables are designed to complement each other. A small advance

in a country with a high level of social development is not the same as a small advance in a country that still has a long way to go.

A third table «Political will» reflects the current position of countries on issues directly linked to governmental decisions expressed in the priority given to social spending, defence spending, ODA, and ratification of fundamental international conventions. This table includes five indicators: percentage of GNP assigned to education expenditure; percentage of the GDP assigned to health expenditure; percentage of GDP assigned to military expenditure; percentage of GNP assigned to ODA (for member countries of the Organisation of Economic Cooperation and Development, OECD); and signatures and ratification of key international

The criterion for listing the countries in these tables responds to three basic simultaneous features: the value of the average status or progress in all areas; the quantity of areas for which the country has information; the alphabetical order of the country's name. In the table «The Present Situation» different colour shadings show countries with equal average values.

Comments on these figures, the methodology followed in building these rankings, the countries' statistical charts and further analysis by civil society organisations from each country about the quality of social policies, political will and alternatives
