Notes:

a. Data refer to the probability at birth of surviving to age 65, times 100.

b. Data refer to estimates for the period specified.

c. The maternal mortality data are those reported by national authorities. UNICEF and the World Health Organization periodically evaluate these data and make adjustments to account for the well-documented problems of underreporting and misclassification of maternal deaths and to develop estimates for countries with no data (for details on the most recent estimates see Hill, AbouZahr and Wardlaw 2001).

Data refer to the most recent year available during the period specified.
